

**\*\*\* MEASURE EACH SKYLIGHT SEPARATELY \*\*\***  
**MEASUREMENTS CAN VARY**

**\*\*\* Skylight wells are hand spackled because of this you may find a small difference in your measuring.\*\*\***

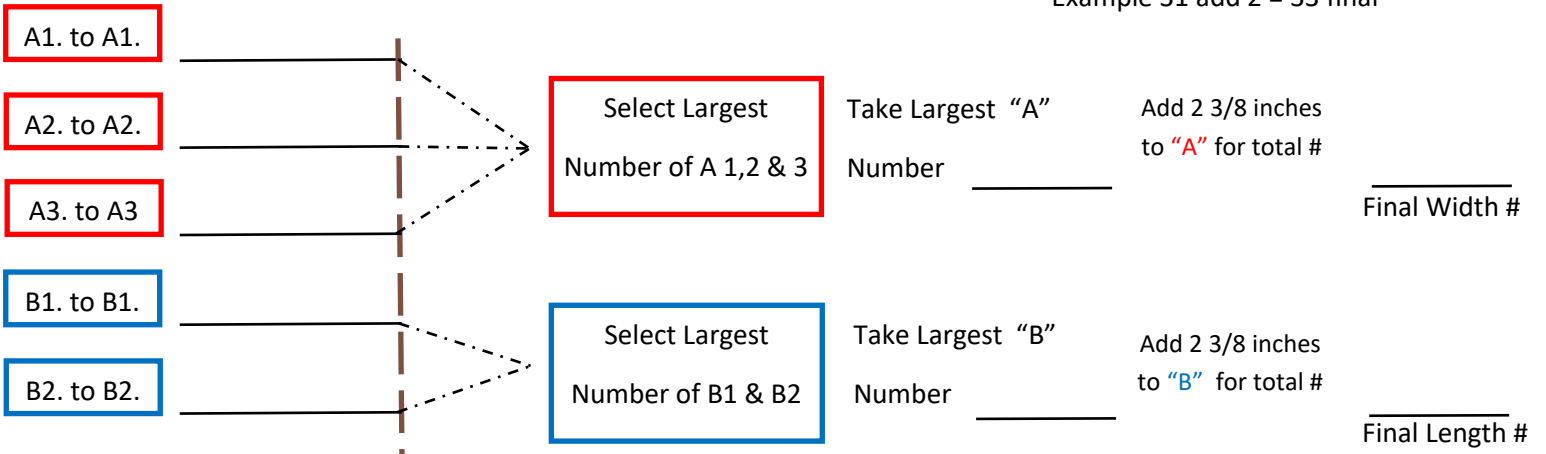

**Measuring your skylight for mounting cover on the ceiling**  
As shown in (fig 1.) measure from edge to edge at the corner of the ceiling and skylight well opening. Measure the opening in 5 places from, A1. to A1., A2. to A2., A3. to A3. and B1. to B1. and B2. to B2.  
*Skylights will show very little to no edging of lighting around covers in this scenario.*

Below **Measuring** is for mounting the cover to the ceiling. This is why you add 2 inches to your largest "A" and "B" numbers. (See photo to the right)

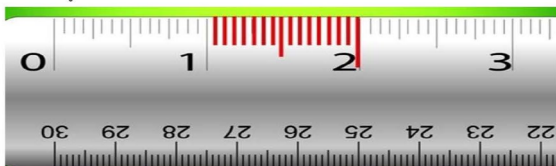

**SHOWING**  
SHAADS® Cover attach to ceiling outside of Skylight opening

**Below** is how to measure for ATTACHING my new cover to the ceiling. Attaching your cover inside skylight opening see "COVER INSIDE".

Example 31 add 2 = 33 final

**The lowest width and length numbers are what you use to calculate your size of frame**

**"Please measure to the 1/16 of an inch."** Example shows 16 red lines between 1" and 2 inches. Counting red lines from left to right every line is a 1/16 - 2/16 - 3/16 - 4/16 and so on 4/16 equals 1/4 inch, 8/16 equals 1/2 inch.

For all measurements please use a measuring tape which measures in inches.
